

Fork Positioner for Forklift

Forklift Fork Positioners - A fork positioner is a tool made out of top quality materials meant to endure the most challenging operations and work environments. This particular piece of equipment can enable drivers to be able to operate the blades hydraulically without leaving the seat. Side shifting models have the extra ability to be able to laterally position the arms or the entire load in order to facilitate much more exact carrying and position in a quicker and more efficient way.

The fork pocket is somewhat unique and enables the individual operating it to securely swing the forks into position without any worry of damaging the positioning cylinders. This can allow the driver the alternative to perform independent or simultaneous fork movement, dependent upon the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages could be transformed into fork positioners on available units.
